CONTACT

Your content, ready to use.

Texts, translations, images and data are prepared for your publications and tools, with a check on the information that must be preserved.

Version du 27 novembre 2026 — Imprimé le 27 novembre 2026

A first sample lets you check quality and cost before the whole volume is processed.

A series of product sheets to update, texts to translate, photographs to prepare or information to extract from documents: the treatment is chosen according to the sources and the result expected.

Writing, improving and translating

Texts can be restructured, reworded or translated. Automated writing can be set up for recurring content, based on verified data. The vocabulary of your business and the reference information are kept in the work.

Documentation work also relies on the working instructions and tools developed by Karbonic, including HTML Editor. Content produced with AI is reread and checked against the sources.

Preparing images

Cut-outs, retouching, illustration and rendering from 3D data are considered according to your need. Inscriptions, proportions and product details are checked. The requirements differ between a mood image and an illustration that must show an exact operation.

Extracting and organising information

Texts or values can be retrieved from documents, classified and prepared for your other tools. Results stay linked to the original files so that they can be verified.

Checking a sample before processing everything

A few representative files make it possible to assess quality, correction time and cost. The delivered formats and the reusable sources are defined before the full processing.
