Suite K: five understated WordPress plugins.

Version du 27 novembre 2026 — Imprimé le 27 novembre 2026

Complete pack free during the launch · 12 November 2026 · Karbonic

Five plugins that each do one precise thing, in the WordPress administration and with no external service required. The complete pack is free during the launch.

The five plugins in Suite K

Suite K brings together five plugins designed for WordPress showcase sites, associations or small organisations. Each can be installed separately; the pack brings them together with their descriptions, screenshots and sharing images. The versions below are those of 12 November 2026.

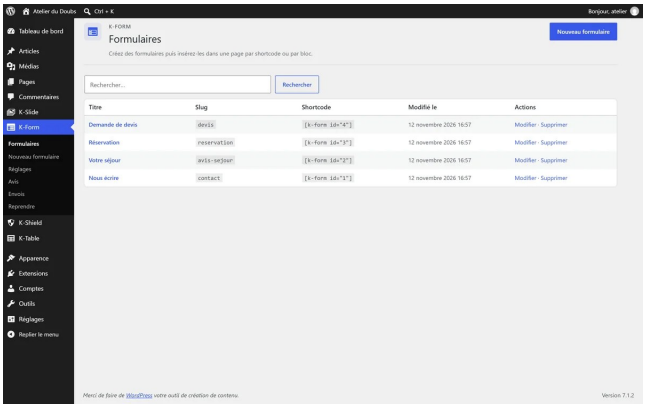

Plugin	Version	In one sentence
K-Form	3.3.7	K-Form creates multi-step forms, stores the answers in WordPress and publishes a guest book of moderated reviews.
K-Slide	0.4.9	K-Slide builds home-page banners in layers: an image, then a title, a text and a button.
K-Table	0.3.0	K-Table reads an XLSX workbook placed in the media library, chooses the visible columns and applies a filter.
K-Static	0.5.0	K-Static saves a frozen copy of the chosen showcase pages, then serves it ahead of WordPress.
K-Shield	2.2.4	K-Shield brings together the firewall, login monitoring, backups and incidents in a calm interface.

K-FManager, a secure file browser, will join the pack when its batches are finished. It is not included in this version.

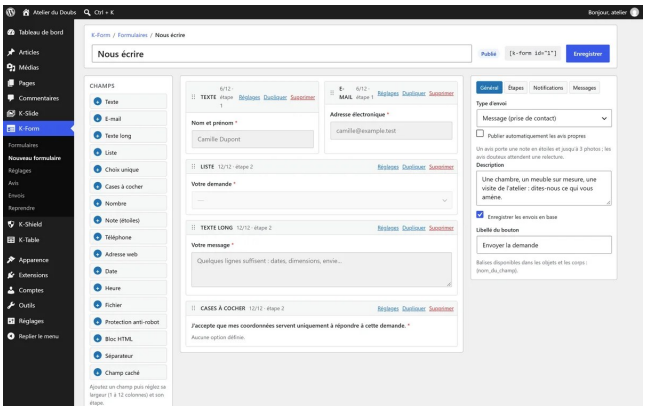

K-Form – clear forms, tidy submissions.

K-Form creates multi-step forms, stores the answers in WordPress and publishes a guest book of moderated reviews. The builder reads from left to right: field types, form grid, then settings. Submissions stay in the database with a readable status and a CSV export; notifications go through the site's SMTP server. No external service or subscription is needed.

- Answers kept in WordPress, with received, read and quarantine statuses.
- Guest book published after review, with average rating and stars.
- Built-in anti-bot protection, with no visually intrusive CAPTCHA.

K-Form builder: fields, steps and a field's settings panel. Screenshot from the demonstration environment, fictitious data. View larger.

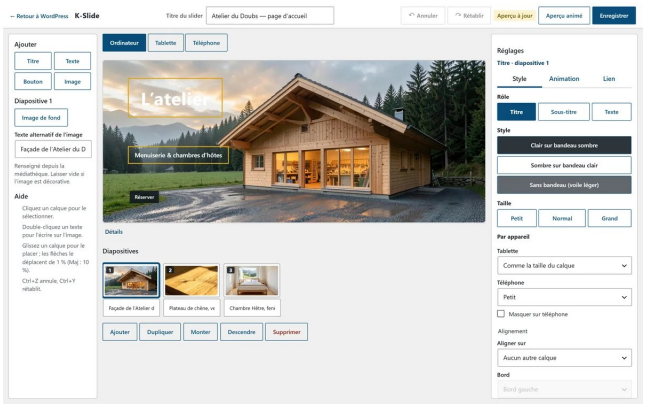

K-Slide – banners placed by hand, rechecked on a phone.

K-Slide builds home-page banners in layers: an image, then a title, a text and a button. Each layer is anchored and adjusted for computer, tablet and phone, with an instant preview. The public banner keeps readable controls and respects the reduced-motion preference. Images stay in the WordPress media library, with no external slider service.

- Layers anchored and offset for each screen width.
- Phone preview before publication.
- Pause, arrows and dots accessible from the keyboard.

K-Slide editor: title layer selected, handles and settings panel. Screenshot from the demonstration environment, fictitious data. View larger.

K-Table – your Excel files become filterable tables.

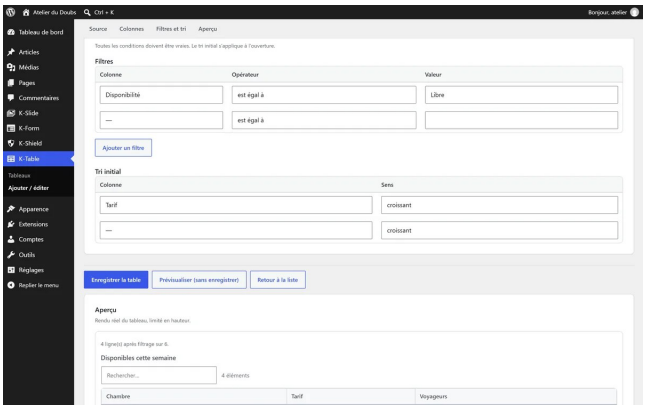

K-Table reads an XLSX workbook placed in the media library, chooses the visible columns and applies a filter. Search and sorting work without jQuery or an external service, with a preview before publication. On a phone, the table scrolls within its frame instead of making the page overflow. Dates and numbers are formatted locally.

- A single XLSX source in the media library.

- Filter, search and sort with no external JavaScript dependency.
- Scrolling contained within the frame on a phone.

“Availability = Free” filter, initial sort and preview of the public table. Screenshot from the demonstration environment, fictitious data. View larger.

K-Static – frozen pages, served without PHP.

K-Static saves a frozen copy of the chosen showcase pages, then serves it ahead of WordPress. An X-KStatic header distinguishes the frozen copy from dynamic rendering, and the service screen shows, page by page, what stays dynamic and why. Pages with a form, a basket or personal content are never frozen. A change to the content automatically invalidates the copy concerned.

- Copy served by Apache, Nginx or a fallback drop-in.
- Pages with a form, basket or personal content stay dynamic.
- Verification of the copy and invalidation at every change.

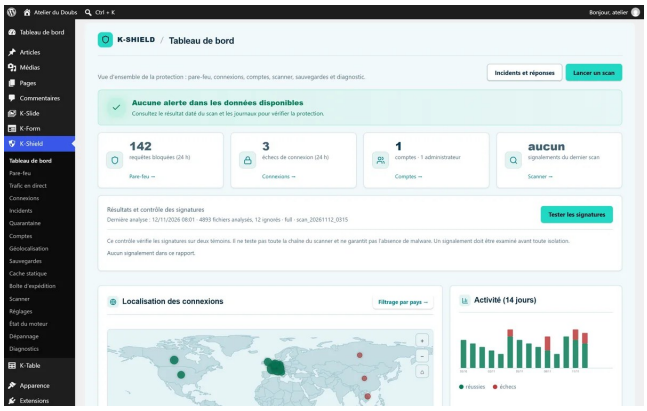

K-Static service screen: frozen pages, last verification and Apache mode. Screenshot from the demonstration environment, fictitious data. View larger.

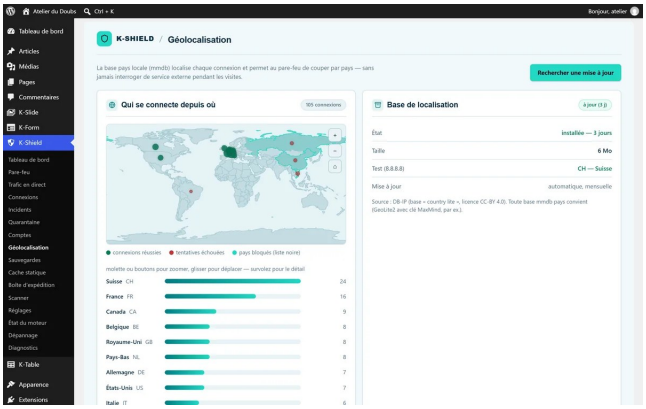

K-Shield – WordPress security that is readable, not noisy.

K-Shield brings together the firewall, login monitoring, backups and incidents in a calm interface. The plugin drives an independent engine that carries out the operations and survives a broken WordPress. Each decision remains readable: blocked requests, failed logins, countries of origin, lockouts. Backups form a full and differential chain, with reversible restoration.

- Firewall, logins, backups and incidents in a single interface.
- Free for 12 months: the key is obtained by entering your email address in K-Shield, with no account.
- Evidence kept and a human decision for each incident.

K-Shield dashboard: verdict, statistics, map and recent activity. Screenshot from the demonstration environment, fictitious data. View larger.

K-Shield geolocation: map of connections, local country database and filtering. Screenshot from the demonstration environment, fictitious data. View larger.

What it replaces

Need	Common assembly	What Suite K brings
Forms	Contact Form 7 + Flamingo + a reviews module	One builder, one inbox and a moderated guest book.
Banners	A heavy slider whose settings only show after publication	Layers adjusted with an instant phone preview.
Tables	wpDataTables or an HTML table retyped by hand	One XLSX source, a filter and a clean table, with no re-entry.
Frozen pages	A general-purpose cache that cannot be checked page by page	An explicit frozen copy, with the reason for each page left dynamic.
Security	A stack of Wordfence + UpdraftPlus + one dashboard too many	Firewall, logins, backups and incidents in one place.

Compatibility

- **WordPress**: 6.7 and later for K-Form, K-Slide, K-Table and K-Static; 5.8 and later for K-Shield. Tested on WordPress 7.1.2.
- **PHP**: 8.0 and later, tested on PHP 8.3.14. K-Table requires the ZipArchive extension.
- **Licence**: Karbonic licence, free during the launch; PHP code under GPL as WordPress requires, the rest and the K-Shield engine proprietary. Text: https://www.karbonic.net/licences.html
- **Server**: Apache 2.4 or Nginx for serving K-Static's frozen pages.
- **K-Shield engine**: The K-Shield engine is included: it is installed with the free key, after an automatic test, and removes itself if the site stops responding.

The plugins are installed in the WordPress administration. These compatibilities are those of the packages tested on the WordPress 7.1.2 (fr_FR) test bench, with PHP 8.3.14. A real installation must be checked with your hosting, your plugins and your backups.

The complete pack is free during the launch

The pack brings together the five plugins, their screenshots, their descriptions and their sharing images. It is offered free during the launch period, while we gather feedback from real use.

Download: coming soon. The complete pack will be available to download here very shortly. Until then, write to us and we will send it to you.

Privacy of registration and sharing

Registration and sharing are optional. Nothing is sent unless the box is ticked in K-Shield, and simply installing it sends no data. Both go through Karbonic's Suite K service, on wpsuite.ch.

- **Registration** – site address, email address given, product, version and date of consent. One record per site is kept in a private folder on the Suite K service's hosting, on wpsuite.ch, outside the public part of the site, while the 12-month discovery licence is being tracked. It is used to establish the licence end date and to inform you of an important update; it is neither resold nor used for advertising.
- **Sharing of infected files** – site address, email address if you give one, date of consent, relative paths and the files chosen (10 at most, 2 MB each). The files are stored in a private folder on the Suite K service's hosting, on wpsuite.ch, under a neutral, non-executable name; they are never published and are used only to diagnose the infection and to improve K-Shield.
- **Downloads** – the counter keeps only the date and the number of downloads. No IP address, browser or account is recorded.
- **Erasure** – to view or have a registration record or a submission erased, write to Karbonic via the contact page, stating the address of the site concerned. The request is handled without the need for justification.

Shared files may contain personal data despite your best efforts. Attach only the files needed for the diagnosis. Karbonic does not execute them and does not distribute them. See also the general privacy policy.

For your project

A form to put back in place, a banner to recheck on a phone, a table to publish or a site to secure: describe the situation. The possibilities and the work needed will be examined with you.

Let’s talk about your project
